

Celtic Transportation Services (CTS)

Celtic has an integrated, fully compliant suite of products to service the motor carrier community in the United States and Canada including IRP, IFTA, Audit, CVIEW, Permitting & Automated Routing, Document Management, and Learning Management.

CTS-IRP™

A powerful solution for managing IRP registration, credentialing and apportionment of fees.

IRP Registration & Credentialing Made Easy

CTS-IRP™ gives you everything you need for processing IRP registrations, including new account creation, supplements and renewals. Capabilities for managing weight groups, fleets, vehicles & distance are built-in and easy to modify.

Base and Foreign Jurisdiction Fee Processing

At the core of CTS-IRP is our Fee Calculator – a regularly updated tool providing accurate fee calculations based on current jurisdiction fee schedules and the Canadian exchange rate. CTS-IRP automates credit apportioning and generates a monthly IRP Clearinghouse file.

Rest Easy with a Fully Compliant System

Our solution interfaces with CVISN and verifies registrant compliance before issuing credentials. We also provide flexible, external interfacing capabilities to accommodate FMCSA certification and credit card transactions.

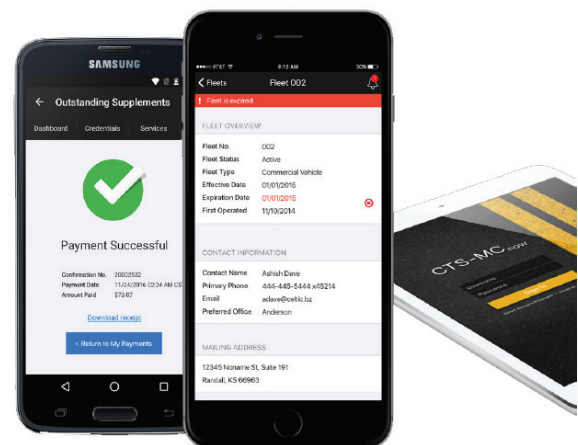

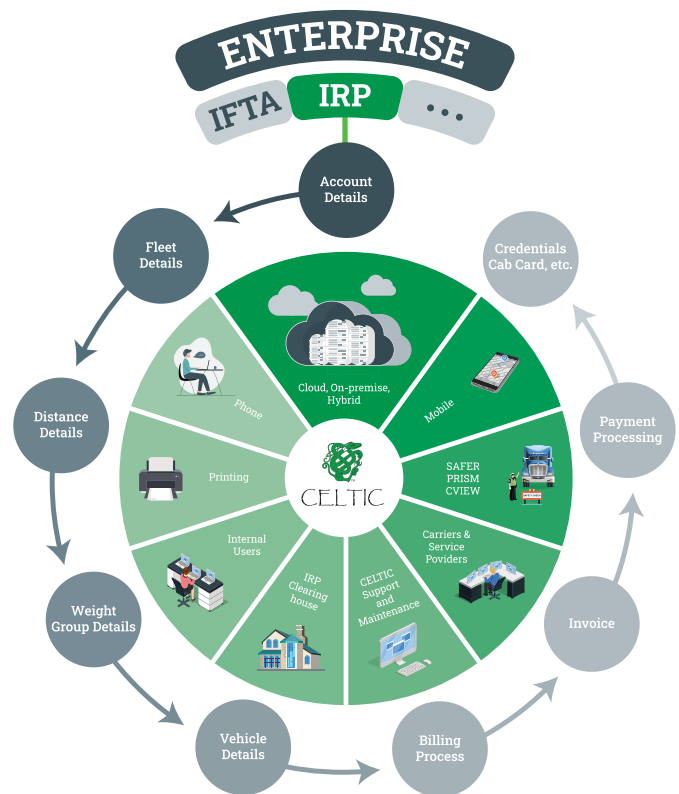

Audit Tools to Keep Carriers on Track

CTS-IRP has built-in tools for selecting, notifying and conducting both current and previous year carrier audits. Our audit selection module produces a prioritized list of carriers who meet criteria specified by the auditor (e.g., rounded miles, year-to-year mileage duplication).

CTS-MCnow™ - Mobile App

Now motor carriers can check the status of their vehicle's registration, inquire on and pay for supplements, store cab cards and other credentials, and get alerts on account activity from their handheld device (smartphone, tablet and laptop).

Flow of the IRP System

CTS-IFTA™

A complete solution for IFTA registration, credentialing, tax reporting and auditing.

CTS-IFTA™ enables jurisdictions to easily administer all aspects of our solution supports license applications and renewals, decal issuance, inventory, processing of inventory, processing of quarterly tax returns, automated transmittals to the IFTA Clearinghouse, monthly funds netting, and audit processing.

- Online self-service
- Supports paper-based reporting
- IFTA Tax Return generation
- Responsive design
- Updated quarterly tax rates
- Interfaces with IFTA Clearinghouse
- IFTA compliant
- Mobile ready

Flow of the IFTA System

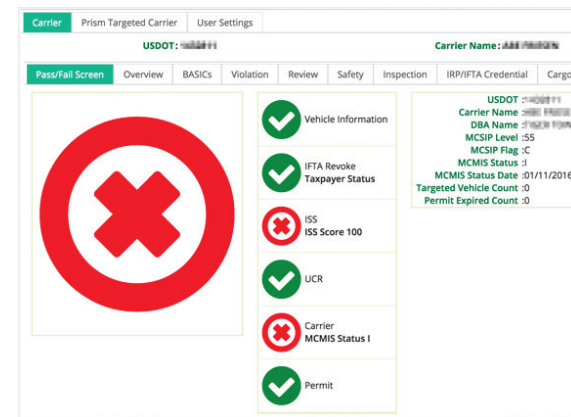

CTS-CVIEW™

A streamlined solution for verifying carrier safety status and vehicle compliance for roadside enforcement, State, and third-party agencies.

When integrated with IRP and/or IFTA our CVIEW solution can be used to check carrier or vehicle registrations to verify they are in good standing. When used in standalone mode, it provides an easy way for law enforcement to check carrier or vehicle safety compliance at the roadside.

CTS-CVIEW interfaces nightly with SAFER to provide updates to, and get updates from other jurisdiction's daily IRP/IFTA activity. With this critical, time-sensitive information at your jurisdiction's fingertips, you'll be able to keep your roads and citizens safer.

CTS-CVIEWnow™ Wearable App

CTS-CVIEWnow is the first smartwatch app using voice entry of a license plate number to quickly return a motor carrier's safety snapshot. Results are based on configurable criteria (MCSIP, MCMIS, ISS, etc.), giving an at-a-glance indication of pass/fail. After an inquiry is performed the data can also be passed to a mobile device or computer for further review.

Enforcement can now efficiently identify and reveal high-risk carriers, allowing more time for comprehensive inspections, while allowing compliant carriers to keep on truckin'!
