

The Regulatory Compliance Technology Leader

AUTOMATED FUEL TAX REPORTING

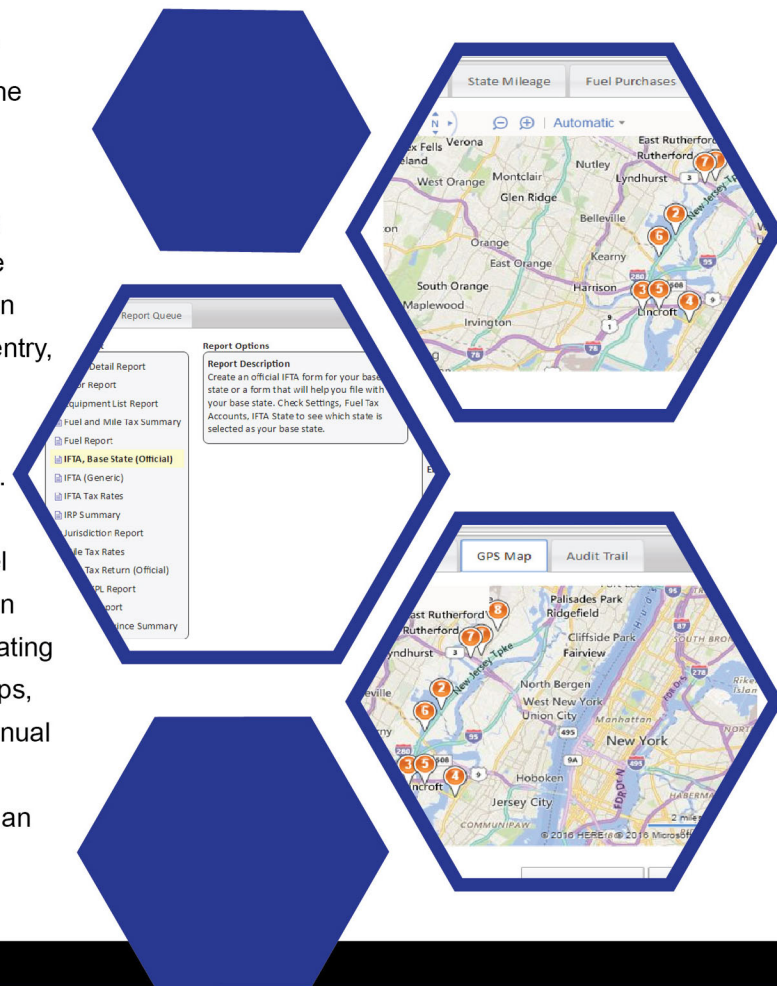

Automated Fuel Tax Reporting (AFTR)

WHO IS PROMILES?

ProMiles Software Development Corporation develops and manages the industry's largest and most accurate mileage and mapping database and is a leading provider of regulatory compliance software technology, including Oversize/Overweight (OS/OW) permitting and routing, fuel tax automation and reporting, fuel management, and routing and mapping solutions, as well as providing data and professional services. ProMiles seeks to meet the ongoing information and technology needs of the transportation industry including jurisdictions, fleets, service bureaus and owner-operators.

Accurate, efficient and timely Fuel Tax reporting is one of the most challenging, and risky, regulatory compliance requirements for any trucking company to manage, with the process traditionally relying on driver records, manual data entry, past reporting methods and endless hours of tedious verification and reconciliation.

The ProMiles Automated Fuel Tax Reporting (AFTR) solution automates trip sheets, eliminating paper documents, missing trips, data entry errors, and the manual creation of reports, while mitigating risk in the event of an audit.

www.ProMiles.com

ProMiles Automated Fuel Tax Reporting (AFTR) solution is a state-of-the-art process, along with software applications, which uses GPS lat/long data to build pre-audit, compliant trips within our industry-leading Routing Engine; each trip is placed into a web-based Fuel Tax account for the user to review, edit and save. Once trips are uploaded, ProMiles imports all required fuel purchase information directly from the fuel card provider, assigns fuel information to trips, and creates reports, including IRP percentages, and State/Provincial IFTA and Mile Tax returns, and more.

The AFTR system includes integration with most GPS/ELD products and most fuel card providers, an extensive suite of reports, and data symmetry with 98% of US State/DOT Auditors who use ProMiles audit solutions to verify IFTA, Log Book and IRP compliance using the same AFTR mileage and routing calculations.
